(54) REMEDY FOR DIABETIC NECROSIS

(57) Abstract:

PURPOSE: To obtain the subject remedy, containing human blood coagulation factor VIII prepared from a human placenta or blood plasma as an active ingredient and having high effects from an early stage of starting treatment.

CONSTITUTION: The subject remedy containing human blood coagulation factor VIII as an active ingredient is produced and administered as an injection.

parantrally administered by a microencapsulating or embedding method, orally administered as a solution, tablet or capsule or administered as a suppository, ointment, etc., to treat diabetic necrosis. The factor VIII fulfills a great role in a treating process of wounds by not only stabilizing fibrin but also forming crosslinkages between the fibrin and fibronectin and promoting proliferation of fibroblasts and epidermization. The remedy is administered in an amount of about 1500 units per day to patients suffering from diabetic necrosis for 5 days.
